WIKI GUIDE HOW TO SUBMIT & EDIT WIKIS

Introductions:

This guide should be used as a handbook to assist Wiki Directors with wiki entries.

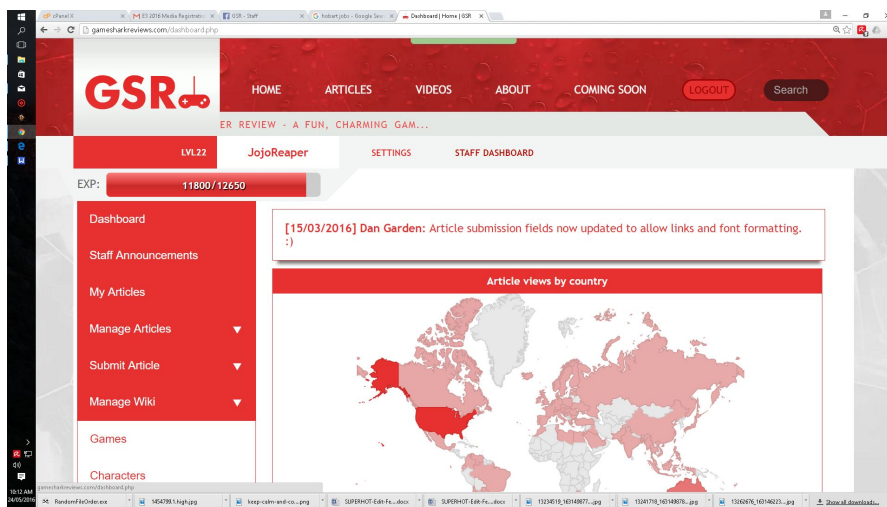

There are several rules to abide by before you can start submitting entries:

- **Never plagiarise from fan-based wikis, competitors wikis, Wikipedia, or anything that correlates.**
- **Only submit legitimate information that can be found on a game's official website, developer website and publisher website.**
- **Characters/Weapons/Missions and levelling information must be secured from the game itself unless it's on the aforementioned official websites.**
- **The About information must be interesting facts about the game. I.e. Whether a game broke record number of sales; took a long time to make; won multiple awards etc.**

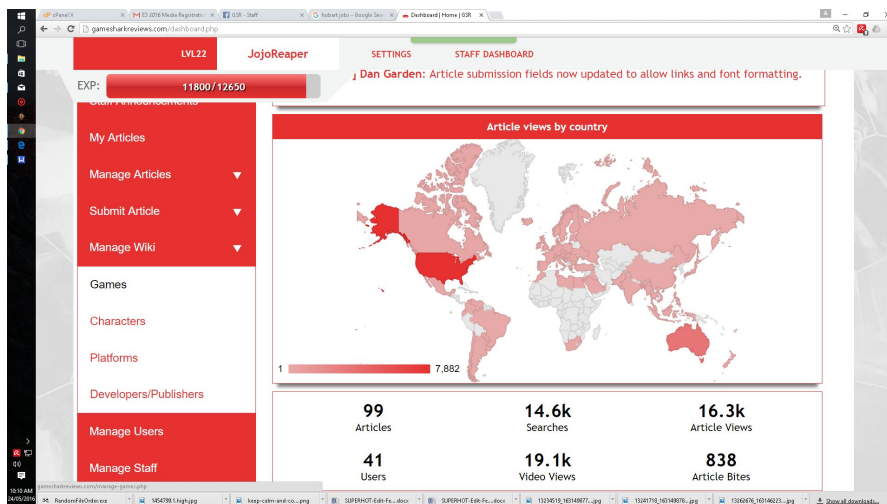

Now that you have the rules, let's begin:

Submitting a game:

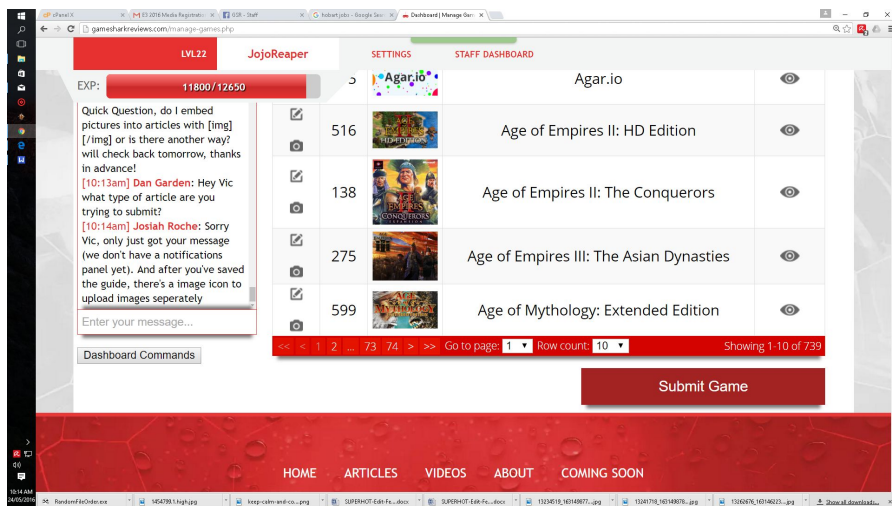

Firstly head to the staff dashboard once you've logged in:

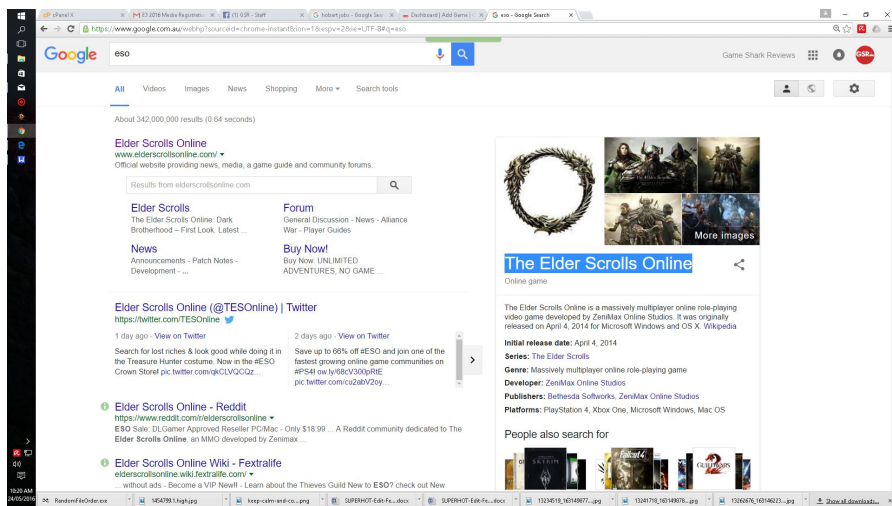

Click on 'Manage Wiki' and then 'Games':

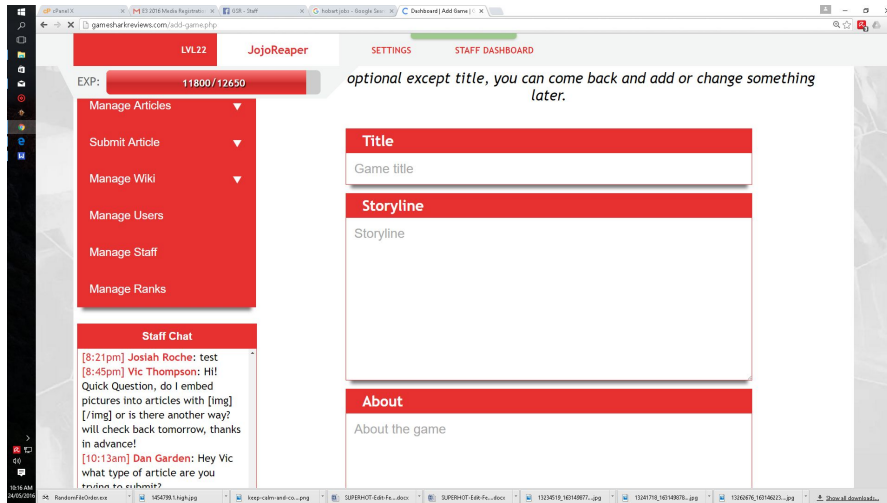

To submit a game, click on the submit button on the bottom right:

Find the official game title found on Google:

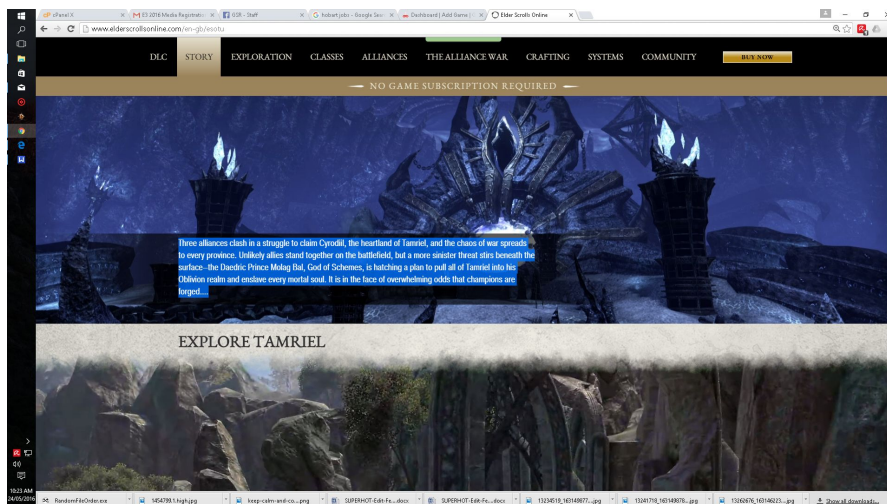

Enter in the blank Game Title field:

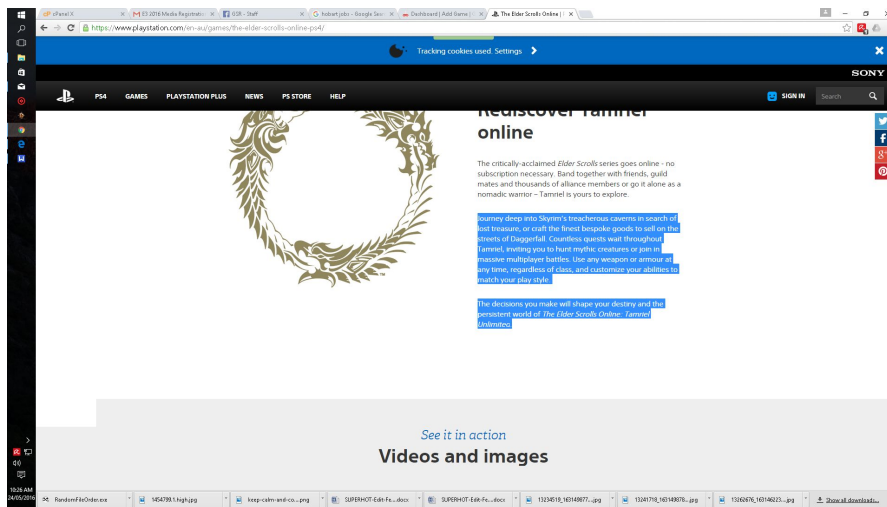

Storyline:

When you are sourcing the storyline, make sure that it's from an official source!

If you cannot find the source on the official website, use the PlayStation Store or Xbox Store:

By copying from an official source, it is not plagiarism, it is merely describing product details.

About:

When sourcing information for the about section make sure you source it from the official website.

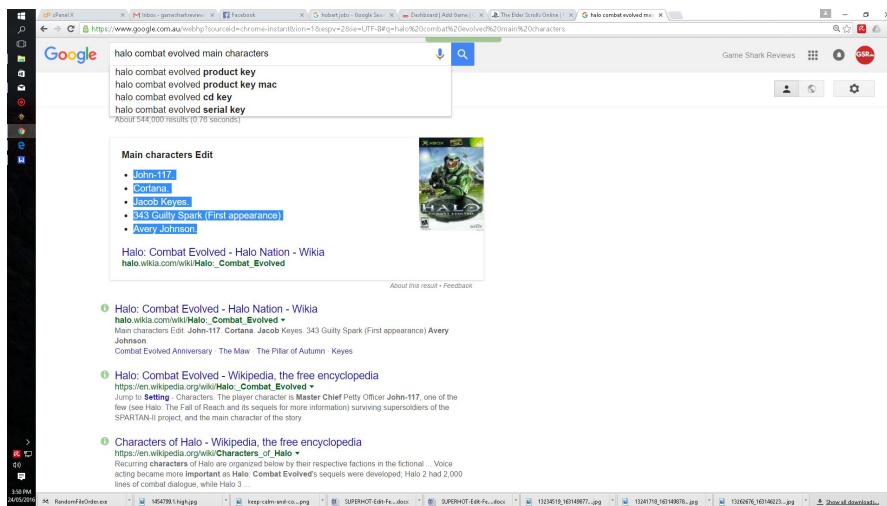

This can be anything from interesting facts about nominees and awards to newsworthy notable achievements.

This can be done by watching behind the scenes videos or looking on official websites or official sites in general (E3 etc).

Characters:

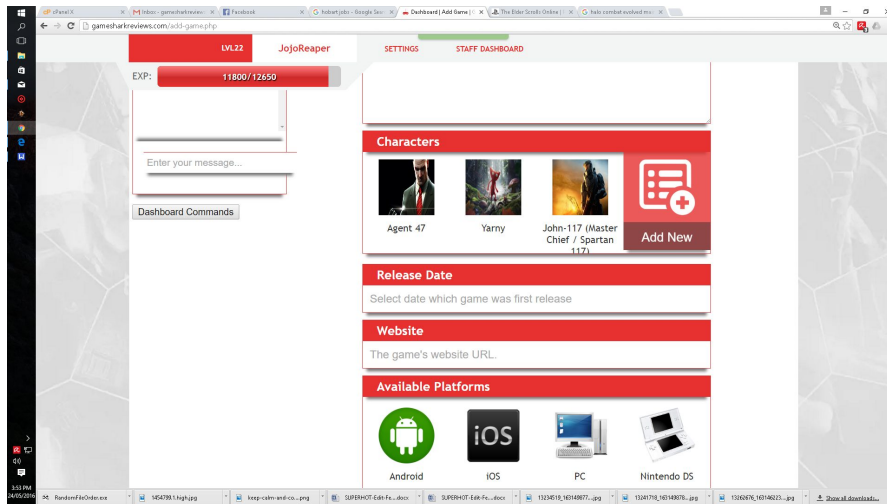

Make sure you add (at the very least) all of the main characters of the video game. For instance, in *Halo: Combat Evolved* there's John-117 (aka Master Chief or Spartan 117), Cortana, Jacob Keyes etc etc.

If you're unsure about the main characters, either play the game or type in Google for the main characters like this:

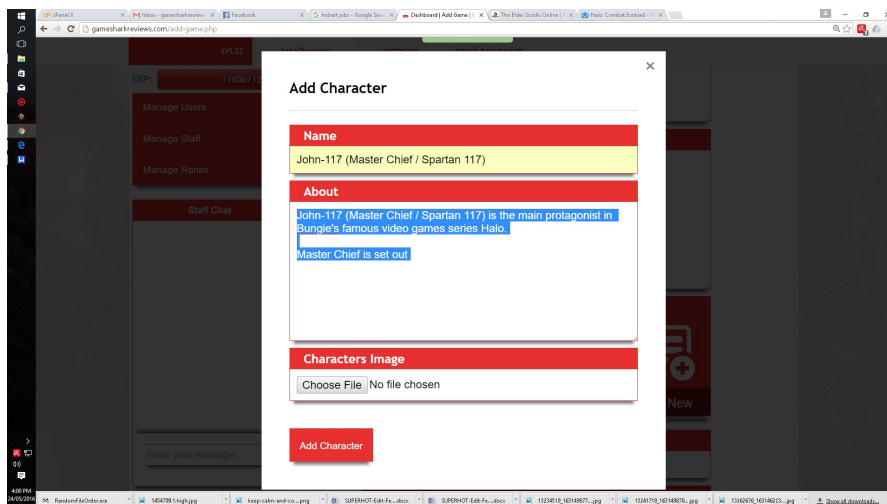

To add a new character make sure that the name is 100% accurate.

Click add new:

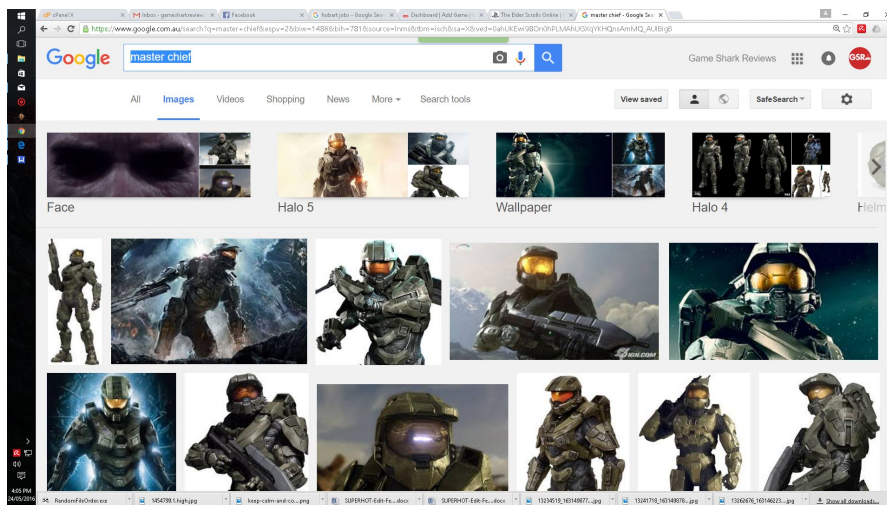

Insert the name and make sure that the back story is accurate:

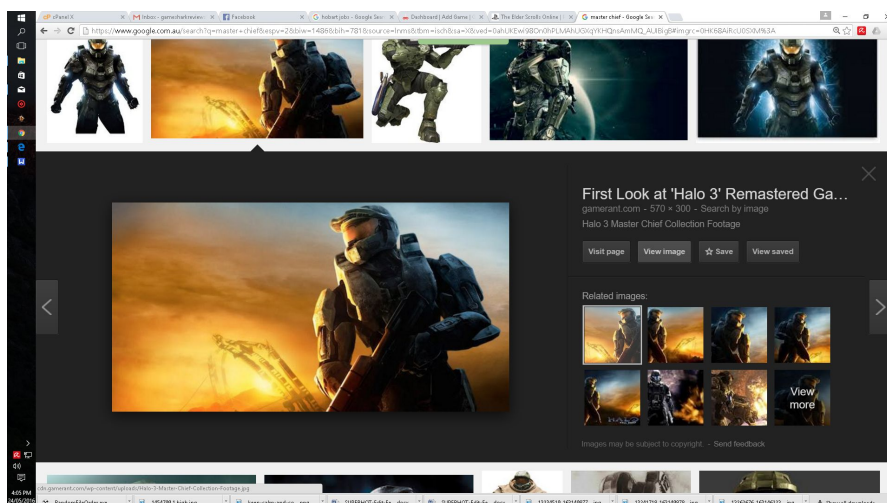

When selecting the image for the character, make sure that it is a prominent picture of the character, and is not stripped from another wiki.

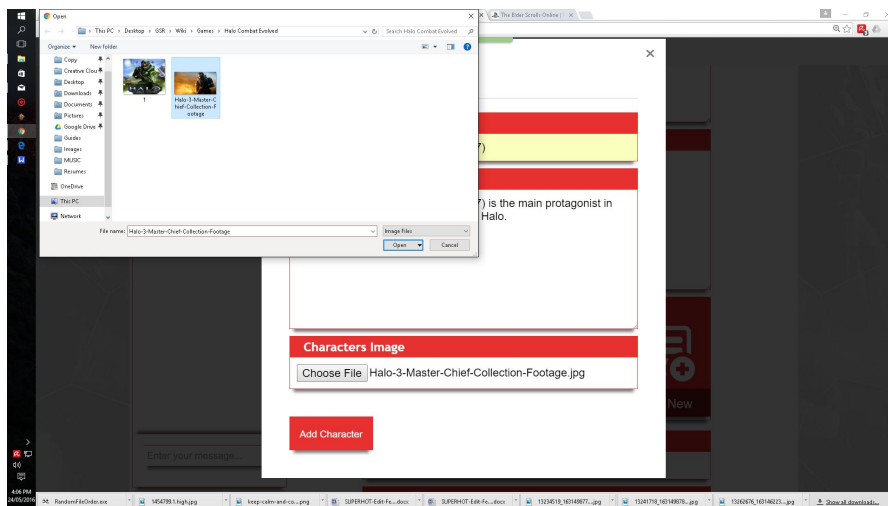

To do this, search on google:

Then select the image and download it.

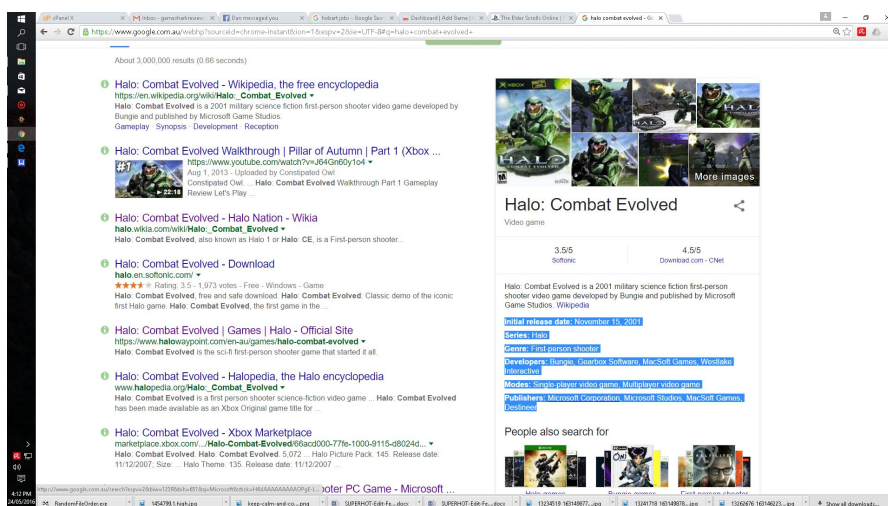

Then upload it. Simple as that. Though high-res images may not work.

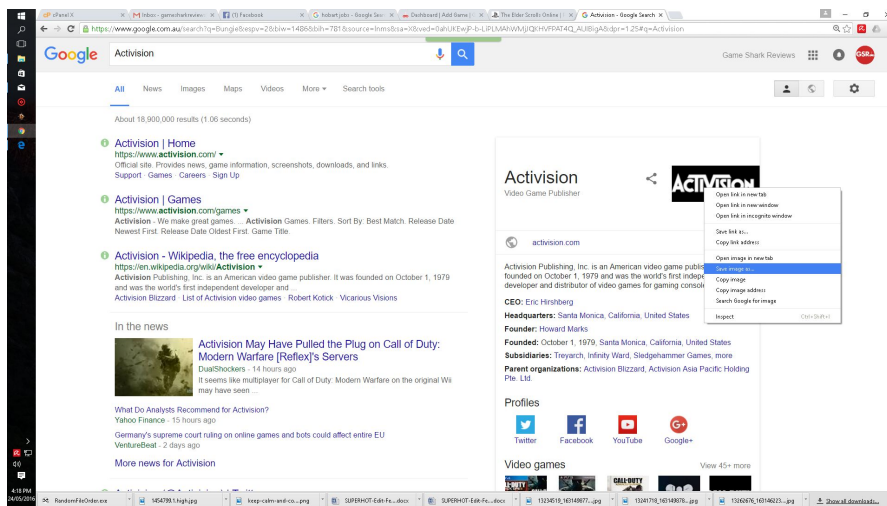

Game Details:

When you're sourcing the official game data, such as release date and publishers, it's always easier to Google the game.

If there's a publisher or developer that isn't on the list (such as an indie), be sure to add them into our database.

Click add new and then input their official details and website. Then when you are sourcing the image, it's easier to copy their image from Google (Make sure it's a PNG file!):

Levelling:

Levelling is the RPG element of the game. If the game has some sort of levelling system, where the player gains points (experience), be sure to include that in the levelling section.

For a game such as *The Division*, you must include how to gain experience points (killing enemies, doing missions), how to level up, what the max level is, any additional levelling systems (in this case the Dark Zone and Gear Score are additional levelling systems).

The greater the detail whilst keeping it succinct as possible is best.

Missions:

Missions are the official episodes or levels in a game. In an RPG, it's good to include all of the main plot quests, but be sure to add side-quests when possible.

Weapons:

Make sure you have the exact weapons in the game.

Categorise them with dot points like this ●

Also make sure weapons are also categorised in uniform:

- Handguns
- Assault Rifles
- Sniper Rifles
- Melee Weapons

Etc.

Cheats:

It's nearly impossible to discover the cheats of games on your own quickly. So make sure you find them on a cheat website.

There will be subsections for each console in the future. But for now we will list all cheats together in sections

For instance, if you searched for GTA: San Andreas cheats, detail them like this:

PS2

- Infinite Health --- Up, X, Left, Right, Left, R1, Left, Up, Down, ▲
 - You are mostly invincible, except you can still die by falling, explosions, getting run over and drowning.

That's the end of the guide. If you have any questions, feel free to contact me at:
